In this index, like the preceeding one, we have kept to the traditional form of listing authors, countries, and subjects. While Volume 20, July to December, 1965, index, which experimented with listing subjects according to their entry in the Ekistic Grid, was considered an interesting document as an analysis of the contents of Ekistics, it did not prove to be a very workable tool as an index for retrieval of specific information by the user. However, in order to retain some of the analytic characteristics of that experiment, the following index relates articles to the Ekistic Grid in two ways:

1. Each subject head has been related to its appropriate Ekistic Element (Nature, Man, Society, Shell, Networks) using the subcategories listed on this page. Thus the first subject reference: ADMINISTRATION (Society 7) refers to number 7 under Society — *Law and Administration.*

2. The contents of each of the six issues indexed have been analyzed upon an Ekistic Grid for a quick visual reference, and these appear opposite. The lined areas denote the field of major emphasis of each issue. Sometimes, this includes more than one Element at the same scale of Ekistic Unit; other times, a single Element covers a range of Ekistic Units. The purpose is to provide an immediate visual notation showing the subject coverage of each issue, within and outside the areas of its major focus. We welcome comments and hope to continue to refine our index so that it might be a useful analytical and retrieval tool for the users.
